		<u>ESTIMATED QUANTITIES (YEAR 1)</u>				
		Verona	Searsport	Newington	Melville	FISC Norfolk
0014A	Periodic Monitoring	0	2	2	N/A	2
0014B	Site Operations & Maintenance (Annual) (Craney Island)	0	0	0	0	1

Questions and Answers:

Question 13. Amendment 5 indicates an estimated quantity of 2 for CLIN 0014 at Searsport. The Amendment 5 task description implies that the quantity should be 0 (zero). Please confirm which is the correct quantity, and if greater than zero, what are the periodic monitoring requirements for Searsport ME?

Answer: This page of amendment #5 is not correct. There are no anticipated monitoring requirements at Searsport. The estimated quantity should be zero for Searsport under CLIN 0014.

Question 14. Amendment 5 task description for Task 14 requires O&M for Craney Island. However the list of estimated quantities in Amendment 5 deletes line item 0014B, which showed a quantity of 12 in Amendment 2. Please confirm that a cost rate for 0014B (Craney Island) should be provided even though the estimated quantity has been deleted. Does the "12" refer to 12 months of O&M?

Answer: Monthly O&M at Craney Island is still required. It is 1 unit for the year. This also will be reflected in the new page that you send out (see CLIN 14B).

Question 3. Based on information received at the Verona site visit and information in Amendment 5, we understand that the periodic monitoring program for groundwater includes semi-annual sampling and analysis for volatile organics and TPH at 10 wells using methods 418.1 and 503.1. However it is not clear how the other methods/quantities listed for Verona in Amendment 5 fit into a periodic monitoring program for that location. (e.g. Will some soil samples be needed in addition to groundwater samples at 10 wells?) Please explain how the quantities for methods 601, 602, 612, 624, and TCLP metals fit into the periodic monitoring program at Verona.

Answer: No soil samples are required as part of the periodic monitoring for the 10 wells. To clarify some confusion Methods NYSDOH 310.13 and EPA 503.1 are groundwater testing methods specified by New York State for this site. We have them errantly located under SOILS Methods. It should be listed under GROUNDWATER Methods. Soils and groundwater testing may be necessary

due to a future requirement under a maintenance contract to perform the 10-yr inspection of the active bulk storage tanks. There may be some dike upgrade work required that will require additional groundwater monitoring and soil removal, testing and disposal. Requirements for these tests are not guaranteed to be tasked under the new environmental services contract. But we need to have the capability. Test methods 601, 602, 612, 624, and TCLP are the anticipated groundwater testing methods that would be required. We are not specifying any soil testing methods at this time.
